Financial Statements of SIMONA AG

2009
1. Business Review

**General economic situation**

In 2009, the global economy found itself in the grip of an unprecedented recession that had begun towards the end of 2008. It was only with the help of far-reaching stability measures directed at the financial systems that governments were able to prevent a total collapse. The crisis was endemic in that it engulfed almost all regions and industries. However, some regions – particularly Asia – returned to growth as early as mid-2009.

In total, the global economy contracted by 0.8 per cent. Germany’s gross domestic product stood at – 5.0 per cent in 2009, the most noticeable decline since the end of the Second World War. Both exports and investments in machinery and equipment suffered a severe blow. Industrial production plummeted to unknown depths, and in April 2009 it was around 30 per cent down on the previous year’s figure. Exports recorded a price-adjusted decline of 14.7 per cent. Capital expenditure on machinery and equipment fell by around one fifth compared to 2008. The economic downturn proved particularly severe in the winter of 2008/2009. However, the economy stabilised over the course of the year, albeit at an extremely low level.

Gross domestic product in the eurozone contracted by 4.0 per cent in 2009 (2008: + 0.7 per cent), while the EU27 region had to contend with a decline of 4.2 per cent in the same period (2008: + 0.9 per cent).

Developments within the company’s principal sales markets in 2009 were as follows:

Germany’s mechanical and plant engineering sector recorded its worst year in decades, with production output plunging by almost 25 per cent in real terms and industry revenue falling by 23.1 per cent in nominal terms, in some areas even by more than 40 per cent.

Orders for new machinery were down 38 per cent year on year, plummeting faster and more dramatically than ever before in the history of the VDMA statistics on order intake.

Within the chemical industry, the first signs of the economic downturn were seen as early as 2008. As a result of this, the sector as a whole gradually emerged from the recession in mid-2009, buoyed to a certain extent by overseas demand. Having said that, the industry still had to contend with an aggregate decline in production of 10 per cent in 2009. At – 12.5 per cent on average, revenue generated by the sector as a whole fell at a more pronounced rate than output.

The crisis also had an impact on Germany’s international trade fairs in 2009, with exhibitor numbers receding by 3 – 4 per cent based on preliminary calculations. The overall exhibition space booked at trade fairs fell by approx. 5 per cent, while visitor numbers dropped by 8 – 9 per cent on average.

The economic downturn also affected the German construction industry, although the blow was cushioned somewhat by targeted stimulus packages. In nominal terms, revenue generated by the principal construction sector contracted by 4 per cent in 2009. Within this context, construction projects in the public sector provided a significant boost to demand, contributing sales growth of 3.4 per cent within the industry as a whole. By contrast, the commercial construction sector declined by 9 per cent.

The economic crisis also had a severe impact on Germany’s plastics-processing industry in 2009, with sector revenue falling by 14 per cent year on year. Production contracted by 11 per cent. Some segments of the industry were more severely affected than others. By way of example, suppliers of engineered plastic components destined for the automotive and electrical sector had to contend with a 20 per cent fall in revenue. By contrast, the packaging industry contracted by just 10 per...
cent. Within this segment, however, producers of industrial packaging were faced with a significant downturn in orders, while business in the area of consumer-goods packaging remained relatively stable. The marked decline in overseas demand proved particularly detrimental to industry performance. Compared to 2008, exports declined by 16 per cent in the period under review.

Revenues and orders at SIMONA AG
SIMONA was severely affected by the general malaise that followed in the wake of the financial crisis. Revenue generated by the parent company, SIMONA AG, fell from €271.2 million a year ago to €191.1 million in 2009, a year-on-year decline of 29.5 per cent. This was attributable primarily to extremely sluggish investment spending within our key sales markets, the chemical and mechanical engineering industries, and the dramatic decline in exports recorded by these sectors. What is more, the fallout from the financial crisis pervaded virtually all customer sectors and sales regions covered by SIMONA AG. Therefore, in contrast to other periods of economic crisis, there was little room for manoeuvre with regard to offsetting shortfalls in specific areas. Within the area of semi-finished products, PP extruded sheets and pressed sheets bore the brunt of the downturn in business, whereas the decline in revenue from foamed PVC sheets was less severe. The overall sales volume of finished parts rose slightly year on year. Within this area, SIMONA has succeeded in positioning itself as a system supplier to the chemical and mechanical engineering sectors. Products made of specialty plastics also showed more forward momentum than our overall business within the area of semi-finished plastics. The decline in revenue generated within the area of piping systems was less pronounced than that of total revenue, mainly as a result of relatively stable sales in the area of PE and PP fittings. As regards international project business, we managed to strengthen our position in the market for water treatment piping systems. SIMONA has divided its market activities into three sales regions:
- Germany
- Rest of Europe and Africa
- Asia, America and Australia

Business development in Germany
Against the backdrop of an unprecedented decline in investment spending and extremely sluggish exports, particularly in the chemical and mechanical engineering sector, SIMONA AG recorded a significant contraction in total revenue within the sales region of Germany. Revenue generated from sales in this region fell by 31.9 per cent to €76.1 million.

Business development in Rest of Europe and Africa
Revenue from sales in the Rest of Europe and Africa also fell sharply during the period under review. Drawing on its solid position in Western Europe, however, the company was able to partially offset the dramatic decline in revenue experienced in Eastern Europe. Revenue within this region contracted by 28.2 per cent to €105.0 million (2008: €146.2 million), which was less severe than the decline in total revenue. Rest of Europe and Africa accounted for 54.9 per cent of SIMONA AG’s total revenue in 2009, up from 53.9 per cent last year.

Business development in Asia, America and Australia
The severe decline in Asia’s economic output from the end of 2008 well into the first quarter of 2009 had a significant impact on SIMONA’s business performance in this region. Demand gradually recovered over the course of the year, resulting in low-level growth in specific markets. The company’s performance in North America was blighted by weak demand in this region,
although the situation improved slightly as the year progressed. Revenue from sales in Asia, America and Australia fell by 24.6 per cent to €10.1 million, a less pronounced decline when compared to that of total revenue.

Earnings performance
Due to the economic climate and the thus resulting decline in revenue, gross profit fell by €24.8 million to €94.3 million. In parallel, however, lower commodity prices helped to lift the company’s gross profit margin from 43.9 to 49.3 per cent.

While the overall volume of finished goods declined in terms of quantities held in stock, the actual value of inventories was up €2.9 million at the end of the reporting date due to the rise in commodity prices towards the end of the year. The decline in other operating income by €2.1 million was attributable chiefly to the fact that last year’s figure had included income from the disposal of the company’s interest in GF SIMONA Fluoropolymer Products GmbH, Ettenheim. Additionally, foreign currency gains were lower than a year ago.

Staff costs fell by €3.4 million to €46.7 million, primarily as a result of short-time work.
Depreciation and write-downs attributable to property, plant and equipment remained stable.

Other operating expenses declined by €7.6 million in the year under review. Within this context, selling expenses were scaled back considerably due to the reduction in outward freight and lower packaging costs as well as a decline in maintenance costs.

Despite the streamlining measures introduced by the company, operating profit fell to €14.8 million (2008: €18.0 million) due to the general decline in business. The EBIT margin was 7.7 per cent.

Production
The SIMONA Group manufactures and markets a range of semi-finished plastics, pipes and fittings as well as finished parts. The materials used include polyethylene (PE), polypropylene (PP), polyvinyl chloride (PVC), polyethylene terephthalate (PETG), polyvinylidene fluoride (PVDF) and ethylene-chlorotrifluoroethylene (E-CTFE) as well as various specialist materials. The production methods applied within this area range from extrusion, pressing and injection moulding to CNC manufacturing. SIMONA also maintains its own plastics laboratories and workshops for the production of customised fittings.

In 2009, semi-finished products (sheets, rods, welding rods) were manufactured at two plants in Kirn (Rhineland-Palatinate), while sheets and finished parts were produced at the company’s plant in Kirchhundem-Würdinghausen (North Rhine-Westphalia) and pipes and fittings at a facility in Ringsheim (Baden-Württemberg).

In November 2009, the Management Board took the decision to close the plant in Kirchhundem-Würdinghausen in response to the significant losses and structural inadequacies associated with this site.

Procurement
The price of standard polymers underwent a significant adjustment at the beginning of 2009. However, in parallel with trends witnessed within the area of crude oil, the price of standard polymers gradually began to rise again as the year progressed. Viewed across the twelve-month period, the prices within this area surged by up to 50 per cent. Specialty commodities and additives reached their low in mid-2009, but without nose-diving completely. Within this segment, too, prices gradually began to rise again since the third quarter of 2009.
Capital expenditure
In view of the general economic conditions, capital expenditure was scaled back significantly in 2009 from €18.9 million to €5.3 million. Within the area of property, plant and equipment, investments included a PVC calender, an extruder, a sheet processing unit as well as a CNC milling and drilling station. Investments in intangible assets were attributable mainly to software licences.

Employees
The number of people employed by SIMONA AG declined in 2009. At 31 December 2009, the company had 957 employees, 56 fewer than at the same date a year ago. The overall headcount declined mainly as a result of part-time employment of staff approaching retirement, natural labour turnover and the expiry of temporary contracts. In addition, some members of staff left the company following the announcement that the Kirchhundem-Würdinghausen plant was to be closed. The average headcount was 971. At the end of the reporting period, the overall number of apprentices was slightly down on last year’s figure, which had been relatively high. At the end of 2009, 59 (2008: 63) young people were enrolled in one of seven apprenticeship programmes centred around training within a technical or business discipline. In 2009, 20 apprentices successfully completed their vocational training with the company. In total, 14 apprentices were offered positions with the company in 2009. Two apprentices are attending part-time degree courses on the basis of the integrated educational programme introduced in 2001 in collaboration with the University of Applied Sciences Ludwigshafen.

At 31 December 2009, 5 female members of staff were on parental leave. SIMONA is committed to the effective use of part-time employment for staff approaching retirement. At the end of 2009, 64 members of staff (2008: 55) had opted for part-time employment until they are eligible for retirement. In total 35 members of staff were able to retire by taking part in the semi-retirement scheme.

In 2009 SIMONA introduced the Balanced Scorecard (BSC) as a strategic management instrument. Managers were trained in the fundamentals of BSC as well as the techniques to be applied within this area. Staff training was also centred around the qualification of the company’s product managers and young professionals. These measures were complemented by specialist training in various disciplines as well as foreign language instruction. The emphasis of IT support in 2009 was on harmonising and standardising processes, as well as improving the performance of the SAP system. The rollout templates were extended to include additional features. Our Italian subsidiary, SIMONA S.r.l. Italia, was integrated within the SAP network as part of the company-wide introduction of SAP. The company also launched sub-project 2 for the introduction of SAP at SIMONA AMERICA Inc.

Significant elements of the internal control and management system with regard to the financial reporting process
Overall responsibility for the internal control system with regard to the financial reporting process and the Group financial reporting process rests with the Management Board. All entities included within the consolidated group have been integrated within this system by means of clearly defined management and reporting structures. The internal control system, which implements specific controls with regard to the financial reporting process, is aimed at providing reasonable assurance that annual financial statements can be prepared in accordance with statutory requirements despite possible risks. The risk management system includes the full range of guidelines and measures required to identify risk and to manage risk associated with commercial operations. The policies, the structural and procedural organisation
as well as the processes of the internal control and risk management system operated in respect of financial reporting have been incorporated in guidelines and organisational instructions that are revised regularly to account for the latest external and internal developments. As regards the financial reporting process, we consider those elements to be of significance to the internal control and risk management system that may potentially influence financial reporting and overall assessment of the annual financial statements, including the management report. These elements are as follows:

- Identification of significant areas of risk and control with an influence over the group-wide financial reporting process
- Monitoring of group-wide financial reporting process and any findings therefrom at Management Board level
- Preventative measures of control with regard to group accounting as well as subsidiaries included in the consolidated group
- Measures that safeguard the appropriate IT-based preparation of items and data of relevance to financial reporting

Quality and environmental management
Quality is one of the integral strengths of the SIMONA brand. The goal of SIMONA’s quality management is to ensure the standardised and sustainable quality of its products and processes. Within this context, the aim is to achieve a consistently high standard of quality at all production sites and regional offices. The Litvinov production facility in the Czech Republic was certified by TÜV Management Service with regard to its quality and environmental management. At present, plans are underway to introduce a quality management system at the new production site in Jiangmen, China, as well as at the company’s North American plant in Hazleton. Among the focal points of SIMONA’s quality management in 2009 were several product audits conducted for the purpose of ensuring compliance with quality criteria defined in specific regulations and quality agreements. The significant reduction in customer complaints prompted by deviations from specified quantities bears testimony to the success of these product audits recently.

Within the area of pipes and fittings the emphasis of quality management was on customer- and country-specific product certifications. In response to customer requirements within this field, the company performed an extensive number of audits for the purpose of documenting to customers or their commissioned auditors our company’s compliance with requisite technical standards.

SIMONA products contribute to the protection of resources, e.g. by replacing heavier materials or by facilitating water treatment. Sustainability has also been defined as a strategic goal with regard to our production processes. Indeed, production-integrated environmental protection plays a pivotal role when it comes to planning new production processes and coordinating fabrication methods. SIMONA’s high standards with regard to energy saving and reduction of production waste are closely monitored and improved. Thus, environmental protection forms an integral part of our continuous improvement process.
2. Review of financial situation

Financial position and cash flows
The total assets of SIMONA AG rose by €5.8 million to €194.5 million.
The overall volume of inventories was scaled down in the period under review. However, this reduction in stock levels was more than offset by higher commodity prices at the end of the year, as a result of which the carrying amount of inventories rose by €2.9 million.
At the end of the reporting period trade receivables amounted to €16.7 million, down €4.3 million year on year due to less buoyant business.
SIMONA AG significantly increased its net cash from operating activities in 2009. This led to a further improvement in the company’s solid level of liquidity. Cash resources increased by €13.5 million to €56.7 million. As regards equity and liabilities, the company recorded a further increase in shareholders’ equity, up €6.4 million to €141.7 million in 2008. The equity ratio rose from 71.7 to 72.9 per cent.
Trade payables fell by €0.9 million to €4.0 million at the end of the reporting period.

3. Expected developments

Slow recovery of global economy
The world economy is on a path to slow recovery. The key economies throughout Asia returned to growth as early as 2009, and there are visible signs of recovery within the industrialised markets. Having said that, this positive performance is also being driven to a certain extent by basis effects following the severe downturn. Furthermore, global monetary and fiscal measures continue to have a stabilising effect. Whereas Germany is likely to reap the rewards of a more dynamic global economy, the outlook for the eurozone as a whole is less convincing. Spain, Ireland and Greece are expected to suffer another decline in GDP in the United States, meanwhile, the industrial sector has been showing some forward momentum. The International Monetary Fund has projected global economic growth of around 3.9 per cent for 2010. The industrialised nations are expected to perform below average, while China and India are likely to generate more dynamic growth of 10 and 7.7 per cent respectively. However, the uncertainties as to future economic performance remain tangible, particularly within the manufacturing industry. The propensity to invest is expected to remain low within the industrial sector as long as sales prospects are poor and excess capacities persist. This scenario will have an adverse effect on SIMONA’s business.
SIMONA anticipates that 2010 will be as challenging as 2009. Revenue generated from sales in January and February remained low, which may also be attributable to the severe winter and the negative effects this had on business within the area of piping systems. Additionally, rising commodity prices have been exerting pressure on profit margins. Against this backdrop, the first quarter is expected to produce break-even results. SIMONA believes that it will take until the second half of the year at the very least before there is any noticeable and
viable recovery. Depending on the level of incoming orders, short-time work will continue at different levels throughout the year; the reduction of working hours has been officially registered up until 1 March 2011. Investment plans will be reviewed in short intervals and adjusted in line with current developments. Despite this situation, SIMONA AG will be looking to grow revenue to a level of €210 to €220 million. Margins will continue to be squeezed by intense competition and developments within the commodity markets. However, these growth targets are achievable if we consistently position the company as a premium supplier within both existing and new markets and if we continue to build on our extensive range of products. Our market strategy includes plans to enter into high-potential fields of application that embrace key ecological trends of the future, such as water supply. Having pressed ahead with product development, e.g. piping systems for desalination plants as well as geothermal facilities, we are confident that SIMONA is well positioned within this area. Against the background of a very difficult first half and the added risks associated with commodity prices, SIMONA will be targeting positive earnings before taxes for the 2010 financial year as a whole. The company’s performance in 2011 will depend on future trends within the markets for raw materials as well as the speed with which the industrialised economies can recover. SIMONA anticipates that, on the whole, demand will continue to improve at a global level in 2011.

Risk report
The risk management system of SIMONA AG controls the following material risks: risks relating to the general business environment and sector, financial risks and IT-specific risks. The risks associated with the general business environment and the sector in which the company operates relate mainly to the economic development of customer segments supplied by SIMONA as well as fluctuating commodity prices and exchange rate movements. Owing to our broad range of products and thorough analysis of the market, we are able to mitigate these risks and respond to changes. The establishment of new production facilities in China and the Czech Republic will help us to improve the company’s flexibility when it comes to meeting new customer requirements at a global level. Price risks associated with exchange rates tend to increase in proportion to revenue generated outside the eurozone. The expansion of production in the United States has helped to scale back risks within this area. What is more, the start of production at our new plant in China at the beginning of 2010 will further mitigate foreign exchange risks. In addition, SIMONA AG addresses the issue of currency risk to the largest extent possible and commercially viable by deploying hedging instruments. Sector-specific risks will continue to be a focal point of our risk management during 2010. Sales and earnings performance in 2010 will be influenced to a large extent by the restrained progression of business within the company’s principal sales markets. The risk situation with regard to the various sales regions, such as Asia and America, has improved slightly. By contrast, commodity price risks have increased during the first few months of 2010 and are thus regarded as a factor of central importance to the company’s earnings performance. Given the difficult market situation, the risk of default is likely to become more pronounced. Within this context,
thorough assessments of credit ratings and continuous monitoring within this area help to mitigate risk as a whole as well as risk associated with individually identifiable items. Default-related risk associated with specific customers is limited by credit insurance and the cut-off of deliveries in the case of outstanding payments. The carrying amounts of inventories were assessed on a regular basis, and adjustments in the form of allowances were made for specific (unsaleable) products. At the end of the 2009 financial year, we are of the opinion that there has been no year-on-year change to the risk situation for the company as a result of the factors outlined above.

4. Other information

Research and development
SIMONA pursues product development at various levels. Our Technical Service Centre is responsible for reviewing customer requirements and refining existing products by making well-judged alterations to polymer properties, e.g. by changing the basic formula. The New Products & Applications unit works in close collaboration with our product management to test new materials and develop plastics for new fields of application. Among the newly developed products in 2009, for instance, was a special PVC for doors manufactured with the help of inline foiling technology. The product is targeted mainly at the UK market. Having said that, in the medium term the inline foiling method looks set to unlock opportunities in a number of other fields of application. We also developed a PVC digital printing sheet, thereby extending our SIMOPOR product family. It is to be launched in 2010. Within the area of compact PVC, the company developed an impact-resistant, thermoformable product variant, which is also to be rolled out over the course of 2010. As regards our polyolefin-based products, we created a foamed sheet made of polyethylene that combines the benefits of high rigidity with very low weight. The piping systems division introduced SIMONA® RC-LINE and SIMONA® SPC-RC-LINE pipes, which offer excellent protection with regard to trenchless and sand-bed-free installation. SIMODRAIN®, a product used for the drainage of traffic routes, was certified by Network Rail in the year under review, thus providing a solid foundation for international expansion within this line of business. The company’s new SIMOFUSE® range was further extended to include PP as a material specially tailored to applications within the area of geothermal (minewater) projects. We also focused on the area of multi-layer extrusion with the express purpose of extending our abilities of coextrusion up to 630 mm, thereby paving the way for future product innovation.

Research and development expenses are mainly comprised of staff costs, material costs and depreciation/amortisation of non-current assets. Owing to the interrelationship between customer-specific manufacturing procedures, optimisation measures within the area of process engineering and formulae as well as product development itself, the above-mentioned expenses cannot be clearly segregated from production costs.

Management Board compensation
The Supervisory Board, based on the recommendations of the Personnel Committee, is responsible for determining the overall compensation of the respective Management Board members. It also regularly reviews the compensation system relating to the Management Board. The Personnel Committee consists of Hans-Werner Marx, Chairman of the Supervisory Board, as well as the Supervisory Board members Dr. Rolf Gößler and Roland Frobel. Compensation for the members of the Management Board of SIMONA AG is calculated on the basis of the size of the company, its commercial and financial position, as well as the level and structure of compensa-
Remuneration for the former members of the Management Board amounted to €853 thousand (2008: €795 thousand). Pension provisions for active and former members of the Management Board were recognised to the full extent and amounted to €8,507 thousand as at 31 December 2009 (2008: €8,341 thousand).

Supervisory Board compensation

Supervisory Board compensation is calculated according to the size of the company, as well as the duties and responsibilities of the Supervisory Board members. The Chairman and the Deputy Chairman as well as members involved in Committees receive supplementary compensation.

Members of the Supervisory Board receive a standard fixed level of compensation amounting to €10,000. The Chairman of the Supervisory Board receives an amount equivalent to double the standard level of compensation; the Deputy Chairman receives an amount equivalent to one and a half times the standard level of compensation. Supervisory Board members who are engaged in Committee work receive supplementary compensation of €5,000. All expenses associated directly with a position on the Supervisory Board, as well as sales tax, are reimbursed.

In addition to fixed compensation, the General Meeting shall be authorised to pass a resolution on a variable component of compensation, payment of which shall be dependent on whether specific corporate performance indicators have been met or exceeded. At the Annual General Meeting of Shareholders on 31 July 2009 no such resolution for variable compensation components was passed for the 2007 financial year.

Supervisory Board compensation for 2009 amounted to €105 thousand (2008: €105 thousand). The company does not grant loans to members of the Supervisory Board.
Board. There are no share option plans or other share-based compensation programmes in place for members of the Supervisory Board.

Declaration on corporate governance pursuant to Section 289 a of the German Commercial Code
The declaration on corporate governance pursuant to Section 289 a (1) sentences 2 and 3 of the German Commercial Code (Handelsgesetzbuch – HGB) has been published by SIMONA on its corporate website at www.simona.de.

Disclosures pursuant to Sections 289 (4) and 315 (4) HGB and explanatory report
As at 31 December 2009, the share capital of SIMONA AG was €15,500,000, divided into 600,000 no-par-value bearer shares (“Stückaktien” governed by German law). Thus, it remained unchanged in the 2009 financial year. The shares are traded in the General Standard of the German stock exchange in Frankfurt as well as on the Berlin securities exchange. There are no different categories of share or shares furnished with special rights. Each share is equipped with one vote at the General Meeting of Shareholders.

On 31 July 2009, the General Meeting of Shareholders of SIMONA AG passed a resolution that amends Section 6 of the Articles of Association and precludes a shareholder’s right to a certificate relating to his ownership interest in the company’s share capital to the extent that this is permissible under law and insofar as the rules of a stock exchange to which the shares are admitted do not require certification. The corresponding amendment to the Articles of Association was entered in the Commercial Register of the Bad Kreuznach District Court on 18 August 2009.

In view of the fact that a shareholder’s right to a certificate of ownership interests has been precluded under the company’s Articles of Association, upon declaration of invalidity of the effective share certificates the share capital of our company is represented only in the form of a global certificate, which has been deposited with Clearstream Banking AG, Frankfurt am Main. Therefore, our shareholders will in future only have an interest as co-owners in the collective holdings of the no-par-value shares in our company, as held by Clearstream Banking AG, according to their interest in the company’s share capital. We shall no longer issue effective share certificates.

As far as the Management Board is aware, there are no restrictions affecting voting rights or the transfer of shares.

An 18.66 per cent interest was held by Anita Bürkle (Kirn), a 12.13 per cent interest by Dr. Wolfgang und Anita Bürkle Stiftung, an 11.64 per cent interest by Dirk Möller (Kirn), an 11.41 per cent interest by Regine Tegtmeyer (Seelze), a 10.67 per cent interest by Kreissparkasse Biberach (Biberach), a 10.0 per cent interest by SIMONA Vermögensverwaltungsgesellschaft mbH (Kirn) and a 10.1 per cent interest by Rossmann Beteiligungs GmbH (Burgwedel). The remaining 15.39 per cent of shares in the company were in free float. On 3 March 2010, Kreissparkasse Biberach notified the company in accordance with Section 21 (1) of the German Securities Trading Act (Wertpapierhandelsgesetz – WpHG) that its voting power in respect of SIMONA AG had exceeded the threshold of 15 per cent of voting rights on 2 March 2010 and that at this date its interest was 15.0038 per cent (corresponding to 90,023 voting rights).

As at 31 July 2009, members of the Management Board reported a total holding of 70,776 own shares; this corresponds to 11.80 per cent of the share capital of SIMONA AG. According to the notification of 31 July 2009, members of the newly appointed Supervisory Board held a total of 1,970 shares. This corresponds to 0.33 per cent of total share capital.
To the extent that employees hold an interest in the company’s capital, these employees themselves directly exercise the rights of control associated with their shareholdings.

The appointment and the removal of members of the Management Board are governed by the statutory provisions set out in Sections 84 and 85 of the German Stock Corporation Act (Aktiengesetz – AktG) as well as by Section 9 of the Articles of Association of SIMONA AG. Under these provisions, the Management Board of the company consists of at least two members. The appointment of deputy members of the Management Board is permitted. The Management Board generally has a chairman to be appointed by the Supervisory Board. The Supervisory Board is entitled to transfer to a Supervisory Board committee the duties relating to the conclusion, amendment and termination of Management Board employment contracts. Any amendments to the Articles of Association must be made in accordance with the statutory provisions set out in Section 179 et seq. of the German Stock Corporation Act.

According to Section 6 of the Articles of Association, the company is entitled to issue share certificates that embody one share (single certificate) or multiple shares (global certificates).

At present there are no significant agreements containing a change of control provision that would apply in the event of a takeover bid.

At present there are no agreements with members of the Management Board or with employees relating to compensation payments in the event of a change of control.

**Forward-looking statements and forecasts**

This management report contains forward-looking statements that are based on the current expectations, presumptions and forecasts of the Management Board of SIMONA AG as well as on information currently available to the Management Board. These forward-looking statements shall not be interpreted as a guarantee that the future events and results to which they refer will actually materialise. Rather, future circumstances and results depend on a multitude of factors. These include various risks and imponderabilities, as well as being based on assumptions that may conceivably prove to be incorrect. SIMONA AG shall not be obliged to adjust or update the forward-looking statements made in this report.

**Closing statement**

We hereby declare that to the best of our knowledge the management report conveys the course of business, the financial performance and the material opportunities and risks associated with the expected development of SIMONA AG.

Kirn, 23 March 2010

The Management Board

Notes to the 2009 Financial Statements of SIMONA AG

General information

These financial statements have been prepared in accordance with Section 242 et seq. and Section 264 et seq. of the German Commercial Code (Handelsgesetzbuch – HGB) as well as on the basis of the relevant provisions set out in the Stock Corporation Act (Aktiengesetz – AktG) and the supplementary accounting requirements of the Articles of Association. In this case, regulations governing large corporations apply. The income statement has been prepared on the basis of the nature of expense method.

Accounting policies

The following accounting policies, which remain largely unchanged compared with the previous year, have been used in preparing the annual financial statements.

Purchased intangible assets are recorded at their cost of acquisition and, to the extent that their useful lives are finite, their carrying amount is appropriately reduced by systematic amortisation. Property, plant and equipment are initially recorded at cost of purchase or cost of conversion and, to the extent that their useful lives are finite, their carrying amounts are reduced by systematic depreciation. Assets relating to property, plant and equipment are written down according to their estimated useful lives on the basis of the maximum rates permissible under tax law. The diminishing balance method of depreciation is applied to movable assets insofar as this is permissible under tax law. Transition to the straight-line method occurs in the year in which the straight-line method results in higher annual depreciation charges. The remaining non-current assets are written down using the straight-line method of depreciation. Low-cost assets with a value up to €410.00 purchased prior to 2008 have been written off fully in the year they were recognised as additions to assets and have been presented under the assumption that an immediate disposal/reirement of the asset has taken place. Low-cost assets that are purchased after 2007 and whose net cost does not exceed €150 are subject to immediate write-downs. Low-cost assets with values ranging from €150.00 to €1,000.00 net are accounted for annually in a collective item. The collective item is subject to consistent depreciation of 20 per cent per annum for a period of five years. Depreciation on additions to property, plant and equipment is performed pro rata temporis. In the case of financial assets, equity interests are carried at the lower of cost or fair value. Inventories are stated at the lower of purchase or conversion cost and current cost. Inventories have been capitalised at the lower of average historical cost or current cost at the reporting date. Raw materials and finished goods were measured on the basis of the LIFO method. The differences in these amounts to those resulting from measurement on the basis of the exchange price or the market price at the balance sheet date have been presented as part of the explanatory notes. The inventories associated with consumables have been capitalised at the lower of average historical cost or current cost at the balance sheet date. Finished goods have been measured at manufacturing cost (cost of conversion) according to item-by-item calculations based on current operational accounting; in addition to the directly related cost of direct material, direct labour and special production costs, this item also includes production and material overheads as well as depreciation in accordance with the minimum requirements specified under German tax law. As in the previous year, all other items held in inventories are stated at the lower of purchase or replacement cost at the balance sheet date. All identifiable risks associated with inventories, relating to holding periods in excess of average duration, diminished usability and lower replacement costs, are recognised by an appropriate write down.
Receivables and other assets are carried at their nominal values. All items subject to risk are written down on an item-by-item basis; where items are subject to a general credit risk, a general allowance is recognised. Non-interest-bearing other assets with a term of more than one year have been discounted. Pension provisions, i.e. retirement benefit obligations, are stated at amounts permissible under tax legislation. The partial values (Teilwert), relating to allocation from date of entry into service) calculated on the basis of actuarial principles in accordance with Section 6 a of the Income Tax Act (Einkommensteuergesetz – EStG) are based on a rate of interest of 6 per cent, applying the Richttafeln 2005 G (actuarial mortality assumptions). The discount rate associated with provisions for partial retirement obligations was 5.25 per cent. Tax and other provisions were created with reference to liabilities, the timing or amount of which were uncertain at the reporting date or in consideration of contingent losses associated with onerous contracts. They are carried at the amount that is deemed appropriate according to reasonable commercial judgement. Liabilities are stated at their repayment amount; to the extent that they are non-current and non-interest-bearing, they are recognised as liabilities at their present value.

Currency translation

In the financial statements of SIMONA AG, receivables and liabilities denominated in foreign currencies are carried at the foreign exchange rate applicable at the date the receivables or liabilities arose, insofar as changes in foreign currency exchange rates do not necessitate a reduction in the carrying amounts of receivables or an increase in the carrying amounts of liabilities. Bank deposits or liabilities denominated in foreign currencies are translated at the closing rate.

Notes to balance sheet

Non-current assets
Changes to individual items classified as non-current assets have been presented in the statement of changes in fixed assets together with details of depreciation and amortisation for the full financial year. Non-scheduled write-downs for machinery were performed under the provisions set out in Section 253(3) sentence 2 HGB. Non-scheduled write-downs amounted to € 1,035 thousand.

Details of shareholdings
Please refer to page 22 for further details of shareholdings.

Inventories
Inventories of raw materials and finished goods are measured on the basis of the LIFO method. The LIFO measurement of inventories entails the classification of inventories into appropriate groups, which are then valued at the lower of cost and net realisable value. The difference arising from the application of this method compared with the average cost method amounted to € 5,898 thousand.

Receivables and other assets
All receivables and other assets have maturities of under one year. In connection with the Act Governing Tax Measures Accompanying the Introduction of the European Company and for the Change of other Tax Regulations (SEStEG), the company capitalised its entitlement to the payment of the corporation tax credit (€ 5,038 thousand) and reported this item under other assets. The respective instalments are due between 2010 and 2017. In addition, reimbursement rights (€ 275 thousand) have been recognised as assets in relation to the Bundesagentur für Arbeit, as the conditions for reimburse-
ment have been met under AltTZG and have been documented on the basis of an Official Notice. The total amount of other assets with a remaining term of more than one year was €4,399 thousand (2008: €4,941 thousand).

**Other provisions**
Other provisions mainly relate to warranty obligations, obligations regarding partial employment for staff approaching retirement, restructuring measures, anniversary emoluments, holiday pay, flexitime surpluses, management and staff bonus payments as well as trade association fees.

**Liabilities**
With the exception of the following “other liabilities” detailed below, all liabilities are due within one year. As a result of statutory changes to the insolvency protection measures required in connection with occupational pension provision in 2006, at the reporting date, the company had an obligation in respect of accumulated benefit entitlements from prior periods that now require supplementary financing. The remaining present value of the obligation is €204 thousand and is payable in 12 equal annual instalments between 2010 and 2021. Additionally, at the reporting date the company had an obligation arising from the significant increase in premiums for insolvency insurance relating to occupational pension provision. The remaining present value of the obligation is €258 thousand and is payable in 4 equal annual instalments between 2010 and 2013. The total amount of liabilities due after one and prior to five years is €263 thousand. The total amount of liabilities with a remaining term of five or more years after 31 December 2009 is €110 thousand. All liabilities are unsecured.

**Contingencies**
SIMONA AG, Kirn, issued absolute suretyships for the benefit of its subsidiaries SIMONA America Inc., Hazleton, USA, SIMONA Asia Ltd., Hong Kong, China, and SIMONA UK Ltd., Stafford, United Kingdom. At 31 December 2009 they amounted to €4,859 thousand, €3,471 thousand and €2,252 thousand respectively.

The company holds currency options that entitle it to sell a total of GBP 3,000,000 and USD 3,500,000 at an agreed rate. The currency options are used for the purpose of hedging SIMONA Group receivables denominated in a foreign currency. On the basis of the market valuation of the options, the unrealised foreign exchange losses at the reporting date were €53 thousand.

**Letter of comfort**
On May 15, 2008, SIMONA AG issued a Letter of Comfort for the subsidiary SIMONA UK Limited, Stafford, United Kingdom. In accordance with this Letter of Comfort, the Company is obliged to furnish the subsidiary with sufficient financial resources so that it is in a position to meet its obligations.

### Notes
- All values are in € ’000.
- The table above provides a detailed breakdown of changes in fixed assets for SIMONA AG, including intangible assets, property, plant, and equipment, and financial assets.
Auditor’s Report

We have audited the annual financial statements – comprising the balance sheet, income statement and notes to the financial statements – in conjunction with the accounting records and management report of SIMONA Aktiengesellschaft, Kirn, for the financial year from 1 January to December 31, 2009. The maintenance of the books and records and the preparation of the annual financial statements and management report in accordance with German commercial law as well as supplementary accounting requirements set out in the articles of association are the responsibility of the Company’s management. Our responsibility is to express an opinion on the financial statements – having referred to the accounting records – and the management report based on our audit.

We conducted our audit of the financial statements in accordance with Section 317 of the German Commercial Code and in compliance with generally accepted German auditing standards promulgated by the Institut der Wirtschaftsprüfer (IDW). Those standards require that we plan and perform the audit such that misstatements materially affecting the presentation of the net assets, financial position and results of operations in the annual financial statements in accordance with German principles of proper accounting and in the management report are detected with reasonable assurance. Knowledge of the business activities and the economic and legal environment of the Company and expectations as to possible misstatements are taken into account in the determination of audit procedures. An audit includes assessing, on a test basis, the efficacy of the accounting-related internal control system, as well as examining evidence supporting the amounts and disclosures in the accounting records, annual financial statements and management report. The audit includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the annual financial statements and management report. We believe that our audit provides a reasonable basis for our opinion. Our audit has not led to any reservations. In our opinion, based on the findings of our audit, the annual financial statements comply with the legal requirements and supplementary provisions of the articles of association and give a true and fair view of the net assets, financial position and results of operations of the Company in accordance with German principles of proper accounting. The management report is consistent with the annual financial statements and as a whole provides a suitable view of the Company’s position and suitably presents the opportunities and risks of future development.
